CAREER OBJECTIVE

Full-stack Developer with a goal of mastering end-to-end web development, including Back-end, Front-end, CI/CD, and deployment. Long-term aim: to become a Software Architect with a focus on scalable and robust system design.

WORK EXPERIENCE

Intern Developer, Hiday Co., Ltd

04/2024 - 11/2024

Technology: ASP.NET Core, Kendo UI and SQL Server

Project:

Electronic Library Website

- Developed user management, book cart, and borrowing features with clear role-based access control and accurate loan-return logic.
- Built book management interface with filtering and time-based borrowing statistics functionality.
- Designed modules for timetable management, work log tracking, faculty working hours, and diploma template handling.

University Management System

- Developed an examination management system for lecturers and students, including question bank creation, exam matrix setup, content sharing, and Excel-based data import.
- Built a payroll and bonus management module to support income calculation, allowance handling, and report generation for HR administration.
- Developed a scholarship management system that enables scholarship fund creation, filtering criteria setup, and automatic student eligibility selection.

PERSONAL PROJECT

LinkU - Real-time Chat Web App

Technology: ASP.NET Core, SQL Server, SignalR, Azure Blob Storage and Redis

- A real-time chat application built with .NET 8, featuring a service-based architecture with separate frontend and backend services. It leverages SignalR for real-time communication, Redis for caching, and a SQL Server database for data persistence. The entire application is containerized using Docker for easy setup and deployment.
